INDEX TO VOLUME 102

Alphabetical Table of Contents of Authors

ABRAMOFF, PETER, REZNEAT M. DARNELL, AND JOSEPH S. BALSANO. Electrophoretic demonstration of the hybrid origin of the gynogenetic teleost *Poecilia formosa*, 555

BALSANO, JOSEPH S. See PETER ABRAMOFF

BARKLEY, D. S. See T. M. KONIJN

BONNER, J. T. See T. M. KONIJN

BROWN, WILLIAM L., JR. An hypothesis concerning the function of the metapleural glands in ants, 188

CHABORA, ALICE J. Disruptive selection for sternopleural chaeta number in various strains of *Drosophila melanogaster*, 525

CHANG, Y. Y. See T. M. KONIJN

CODY, MARTIN L. On the methods of resource division in grassland bird communities, 107

COHEN, JOEL E. Alternate derivations of a species-abundance relation, 165

COOK, STANTON A. See MICHAEL P. JOHNSON

COUTLEE, ELLEN L., AND R. I. JENNRICH. The relevance of logarithmic models for population interaction, 307

DA CUNHA, A. BRITO. See H. LAGHI DE SOUZA

DARNELL, REZNEAT M. See PETER ABRAMOFF

DAWSON, PETER S. Xenocide, suicide, and cannibalism in flour beetles, 97

DEAKIN, MICHAEL A. B. Continuous clines and population structure, 295

DE SOUZA, H. LAGHI, A. BRITO DA CUNHA, AND E. P. DOS SANTOS. Adaptive polymorphism of behavior developed in laboratory populations of *Drosophila willistoni*, 583

DINGLE, HUGH. Life history and population consequences of density, photo-period, and temperature in a migrant insect, the milkweed bug *Oncopeltus*, 149

DOS SANTOS, E. P. See H. LAGHI DE SOUZA

EMLEN, J. MERRITT. Batesian mimicry: a preliminary theoretical investigation of quantitative aspects, 235

A note on natural selection and the sex ratio, 94

Optimal choice in animals, 385

Selection for the sex ratio, 589

GANS, CARL. Relative success of divergent pathways in amphisbaenian specialization, 345

Erratum, 597

GIANUTSOS, R. R. See T. C. SCHNEIRLA

GITTLESON, S. M., AND T. L. JAHN. Pattern swimming by *Polytomella agilis*, 413

GRANT, P. R. Polyhedral territories of animals, 75

GREENWOOD, J. J. D. Coexistence of avian congeners on islands, 591

GRELL, RHODA F. The relation between inversion heterozygosity

and dominant lethality in *Drosophila pseudoobscura*, 87

HARRINGTON, ROBERT W., JR., AND KLAUS D. KALLMAN. The homozygosity of clones of the self-fertilizing hermaphroditic fish. *Rivulus marmoratus* Poey (Cyprinodontidae, Atheriniformes), 337

HINEGARDNER, RALPH. Evolution of cellular DNA content in teleost fishes, 517

HOENIGSBERG, H. F. An ecological situation which produced a change in the proportion of *Drosophila melanogaster* to *Drosophila simulans*, 389

Rate of elimination of natural lethals, 185

HUBBY, JOHN L., AND LYNN H. THROCKMORTON. Protein differences in Drosophila. IV. A study of sibling species, 193

IMAIZUMI, YOKO. See MASATOSHI NEI

INGER, ROBERT F. See MONTE LLOYD

JAHN, T. L. See S. M. GITTLESON

JAIN, S. K. See D. R. MARSHALL

JANZEN, DANIEL H. Host plants as islands in evolutionary and contemporary time, 592

See THOMAS W. SCHOENER

JENNRICH, R. I. See ELLEN L. COUTLEE

JOHNSON, MICHAEL P., AND STANTON A. COOK. "Clutch size" in buttercups, 405

JOHNSON, MICHAEL P., LARRY G. MASON, AND PETER H. RAVEN. Ecological parameters and plant species diversity, 297

KALLMAN, KLAUS D. See ROBERT W. HARRINGTON, JR.

KARLIN, SAMUEL. Rates of approach to homozygosity for finite stochastic models with variable population size, 443

KING, F. WAYNE. See MONTE LLOYD

KONIJN, T. M., D. S. BARKLEY, Y. Y. CHANG, AND J. T. BONNER. Cyclic AMP: a naturally occurring acrasin in the cellular slime molds, 225

LEVIN, DONALD A. The breeding system of *Lithospermum caroliniese:* adaptation and counteradaptation, 427

LEVINS, RICHARD. See LEIGH VAN VALEN

LLOYD, MONTE, ROBERT F. INGER, AND F. WAYNE KING. On the diversity of reptile and amphibian species in a Bornean rain forest, 497

MACARTHUR, ROBERT. Selection for life tables in periodic environments, 381

MCDONALD, DANIEL J., and LAURA STONER. Population fitness in *Tribolium*. II. Population characteristics influencing the capacity for survival, 323

MARSHALL, D. R., AND S. K. JAIN. Phenotypic plasticity of *Avena fatua* and *A. barbata*, 457

MASON, LARRY G. See MICHAEL P. JOHNSON

MAYNARD SMITH, J. Evolution in sexual and asexual populations, 469

MOYNIHAN, M. The "Coerebini": a group of marginal areas, habitats, and habits, 573

MURPHY, GARTH I. Pattern in life history and the environment, 391

NEI, MASATOSHI, AND YOKO IMAIZUMI. Efficiency of selection for increased or decreased recombination, 90

PANDEY, KAMLA K. Compatibility relationships in flowering plants: role of the *S*-gene complex, 475
PARSONS, R. F. The significance of growth-rate comparisons for plant ecology, 595
PASTERNACK, B. S. See T. C. SCHNEIRLA
PATRICK, RUTH. The structure of diatom communities in similar ecological conditions, 173
PROUT, TIMOTHY. Sufficient conditions for multiple niche polymorphism, 493
RAVEN, PETER H. See MICHAEL P. JOHNSON
ROSENZWEIG, MICHAEL L. Anecdotal evidence for the reality of character convergence, 491
Net primary productivity of terrestial communities: prediction from climatological data, 67
SANDERS, HOWARD L. Marine benthic diversity: a comparative study, 243
SCHAFFER, WILLIAM M. Character displacement and the evolution of the hominidae, 559
SCHNEIRLA, T. C., R. R. GIANUTSOS, AND B. S. PASTERNACK. Comparative allometry in the larval broods of three army-ant genera, and differential growth as related to colony behavior, 533
SCHOENER, THOMAS W., AND DANIEL H. JANZEN. Notes on environmental determinants of tropical versus temperate insect size patterns, 207
SPIESS, ELIOT B. Low frequency advantage in mating of *Drosophila pseudoobscura* karyotypes, 363
STONER, LAURA. See DANIEL J. MCDONALD
SVED, J. A. Possible rates of gene substitution in evolution, 283
THROCKMORTON, LYNN H. See JOHN L. HUBBY
VANDERMEER, JOHN H. Reproductive value in a population of arbitrary age distribution, 586
VAN VALEN, LEIGH, AND RICHARD LEVINS. The origins of inversion polymorphisms, 5
VASEK, FRANK. The relationships of two ecologically marginal, sympatric *Clarkia* populations, 25
WALLACE, BRUCE. On the dispersal of Drosophila, 85
WILSON, EDWARD O. The ergonomics of caste in the social insects, 41
WRIGHT, SEWALL. Dispersion of *Drosophila pseudoobscura*, 81

Subject Index

acrasin, 225
adenine mono-phosphate, 225
age distribution, 586
allometry, 533
amphibian diversity, 497
amphisbaenids, 345
ants, 41, 188
army ants, 533
asexual reproduction, 469
Avena barbata, 457
Avena fatua, 457

Batesian mimicry, 235
behavior genetics, 583
benthic diversity, 243
biochemical evolution, 193, 517
bird communities, 107, 591
Borneo, 497
breeding systems, 427
buttercups, 405

cannibalism, 97
character convergence, 491

character displacement, 559
Clarkia, 25
climatology, 67
clines, 295
clutch size, 405
Coerebini, 573
coexistence, 591
communities, 107
community structure, 173
compatibility in plants, 475
Cyprinodontidae, 337

diatoms, 173
dispersal, 81, 85
disruptive selections, 525
DNA evolution, 517
Drosophila, 193
Drosophila melanogaster, 389, 525
Drosophila pseudoobscura, 81, 85, 87, 363
Drosophila simulans, 389
Drosophila willistoni, 583

electrophoresis, 555
ergonomics, 41

fish genetics, 337
flour beetles, 97

gene substitution rate, 283
genetic drift, 443
grasslands, 107
growth rates, 595
growth rates in ants 533

hermaphroditism, 337
Hominidae, 559
host plants of insects, 592

insect caste, 41
insect size, 207
inversions, 5, 87, 363
island communities, 591, 592

lethal genes, 87, 185
life-history phenomena, 149, 381, 391
Lithospermum caroliniense, 427

marginal habitats, 573
marginal populations, 25
marine diversity, 243
mating efficiency, 363
metapleural glands, 188
milkweed bugs, 149
mimicry theory, 235
minority effect, 363

natural selection, 185, 381

Oncopeltus, 149
origin of fish hybrids, 555

pattern swimming, 413
periodic environments, 381
phenotypic plasticity, 457
photo-period, 149
plant ecology, 595
Poecilia formosa, 555
polymorphism, 583
polymorphism inversion, 5, 87, 363
polymorphism theory, 5, 493
Polytomella agilis, 413
population density, 149
population fitness, 323
population growth, 307, 323
population models, 307
population size (effective), 443
population structure, 295
primary production, 67
protein evolution, 193

rain forest, 497
Ranunculaceae, 405
reproductive value, 586
reptile diversity, 497
reptile evolution, 345
resource division, 107
resource use, 385
Rivulus marmoratus, 337

selection, 94, 295, 525, 589

selection efficiency, 90
selection for recombination, 90
self-fertilization, 337
sex ratio, 94, 589
sexual reproduction, 469
S-genes, 475
sibling species, 193
slime molds, 225
species abundance, 165, 389
species diversity, 297, 497
species hybrids, 555
sternopleural chaetae, 525
survival, 323
sympatric species, 25

teleost fishes, 337, 517, 555
temperate insects, 207
terrestrial communities, 67
territoriality, 75
Tribolium, 97, 323
tropical diversity, 497
tropical insects, 207

xenocide, 97
